

GMP APC/Fire™ 750 anti-human CD8 Antibody

Catalog# / Size 260228 / 100 tests

Clone SK1

Other Names T8, Leu2

Mouse IgG1, κ Isotype

Description CD8a is a 32-34 kD type I glycoprotein. It forms a homodimer (CD8a/a) or heterodimer

> (CD8a/b) with CD8b. CD8, also known as T8 and Leu2, is a member of the immunoglobulin superfamily found on the majority of thymocytes, a subset of peripheral blood T cells, and NK cells (which express almost exclusively CD8a homodimers). CD8 acts as a co-receptor with MHC class I-restricted T cell receptors in antigen recognition and T cell activation and has been shown to play a role in thymic differentiation. Two domains in CD8a are important for function: the extracellular IgSF domain binds the α_3 domain of MHC class I and the cytoplasmic

CXCP motif binds the tyrosine kinase p56 Lck.

Product Details

Reactivity Human, Cynomolgus, Rhesus

Reported Reactivity African Green, Chimpanzee, Pigtailed Macaque, Sooty Mangabey

Antibody Type Monoclonal

Host Species Mouse

Formulation Phosphate-buffered solution, pH 7.2, containing True-Stain Monocyte Blocker™, 0.09% sodium

azide and 0.2% (w/v) BSA (origin USA) and a stabilizer.

Preparation The antibody was purified by affinity chromatography and conjugated with APC/Fire™ 750 under

optimal conditions.

Concentration 100 µg/mL

The antibody solution should be stored undiluted between 2°C and 8°C, and protected from Storage & Handling

prolonged exposure to light. Do not freeze.

Application FC - Quality tested

Recommended Usage Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric

analysis. For flow cytometric staining, the suggested use of this reagent is 5 µL per million cells in 100 μL staining volume or 5 μL per 100 μL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

* APC/Fire™ 750 has a maximum excitation of 650 nm and a maximum emission of 787 nm.

Excitation Laser Red Laser (633 nm)

Clone SK1 recognizes the a chain of CD8. Additional reported applications (for the relevant Application Notes

formats) include: proteogenomics⁸, immunohistochemistry of acetone-fixed frozen tissue sections, and spatial biology (IBEX)^{9,10}. This clone was tested in-house and does not demonstrate utility for

formalin-fixed paraffin-embedded (FFPE) human tonsil sections.

are manufactured in a dedicated GMP facility and compliant with ISO 13485:2016. For research use only. Not for use in diagnostic or therapeutic procedures. Our processes include:

- · Batch-to-batch consistency
- Material traceability
- Documented procedures
- · Documented employee training
- Equipment maintenance and monitoring records
- Lot-specific certificates of analysis
- Quality audits per ISO 13485:2016
- QA review of released products

Antigen Details

Structure Ig superfamily, homodimer or heterodimer with CD8b, 32-34 kD

Distribution Majority of thymocytes, T cell subset, NK cells

Function MHC class I co-receptor, thymic differentiation, T cell activation

Ligand/Receptor MHC Class I molecules

Cell Type NK cells, T cells, Thymocytes

Biology Area Immunology

Molecular Family CD Molecules

Product Data

Typical results from human peripheral blood lymphocytes stained either with SK1 APC/Fire™ 750 used at 5 μL/test (filled histogram) or with an isotype control (open histogram).
